

‘Water’ good idea!

Three ways you can save water in this restroom.

1. Report any loo leaks to maintenance.

Around 400 million litres of water leaks from UK toilets every day; enough to supply the populations of Edinburgh, Manchester, Liverpool, Bristol, Sheffield, Cardiff and Belfast combined for 24 hours.

2. Only run the tap for as long as you need to and check it's fully turned off when you're done.

A flowing tap produces six to 15 litres of water every minute.

3. If you don't have dual-flush toilets that allow you to perfect your flush, ask to install 'Hippos'.

These cistern displacement devices force each flush to use less water.

Your water needn't cost the earth.

Speak to your office manager to find out more ways you can boost water efficiency in your workplace.
